## ALCI INTERCONTINENTAL FLIGHTS - IL76 TD

- The IL 76 is a heavy-cargo aircraft with four jet engines, high wing, designed as a bulk cargo-personnel transporter with the capacity to operate on rough fields. The aircraft is supplied with rear ramp access with an autonomous system to load and offload freight. It is also fully equipped to airdrop different kinds of cargo using the rear ramp access.
- The IL76 is outfitted with HF/VHF radios and Iridium satellite communication equipment, as well as primary and secondary GPS navigation systems.
- The internal configuration can be changed depending on the transport needs. For Antarctic flights, the aircraft is equipped with comfortable seats according to the number of passengers of the flight. In addition to standard security devices, it is also equipped with SOS grab-bags, containing elementary provisions, a first-aid kit and basic survival and signaling equipment.

### IL76 specifications

Maximum Payload	20 tons
Maximum Passengers Capacity	80 pax
Range at the Maximum Payload	6 500 km
Cruising Speed	760 km / hr
Cruising Altitude	10 000 mt
Take off Run	2 000mt
